Beyond the Demo

Engineering Agentic Systems that Ship

Workshop
Custom POC
Accelerator

Engagement Length

- *Workshop: 2-3 days*
- *Custom POC: Multi-week*
- *Accelerator: Ongoing*

Recommended Participants

- *Architects*
- *Developers*
- *Data/AI Engineers*
- *Technology Leaders*

Customer Inputs

- *Target AI Use Case*
- *Sample Business Data*
- *Azure Environment*

Engagement Outcomes

- *Agentic Guidance*
- *Reference Application*
- *Validated POC*
- *Reusable Accelerator*

Why Agentic Systems Stall

Everyone's building agents. Few of them reach production.

Production-ready agentic systems demand more than a working agent. Teams must engineer for reliability, scalability, maintainability, observability, and governance.

This Microsoft workshop delivers prescriptive guidance, hands-on experience, and reusable engineering assets for building robust agentic systems on the Microsoft AI and Azure cloud platform.

Your Agentic Engineering Foundation

Six patterns that carry agents into production:

Your Learning Roadmap

- Start with instructor-led guidance on engineering agentic systems.
- Build a functioning multi-agent reference application in a guided workshop, using a pre-built agent harness and AI infrastructure.
- Partner with Microsoft to apply those same assets to a working prototype of your top AI use case.
- Reuse project assets, patterns, and knowledge to accelerate your agentic estate.

Your Takeaways

What you keep and reuse:

Prescriptive Platform Guidance:
